

August 2015

As part of Innova Solutions commitment to the environment we continuously work on improving the environmental performance of our products. In recent years the focus of our environmental programme has been focused on chemicals management and the recyclability of our products.

As such we work within the framework of the **REACH & RoHS directives**.

REACH is a European Union regulation concerning the Registration, Evaluation, Authorisation and restriction of Chemicals. It came into force on 1st June 2007 and replaced a number of European Directives and Regulations with a single system.

Consequently, we monitor the individual components that go to making up our adhesive products and comply with any substance restrictions that are introduced via the directive.

RoHS is the Restriction of the Use of Certain Hazardous Substances (RoHS) in Electrical and Electronic Equipment (EEE) Directive ([2011/65/EU](#)) transposed into UK law on 2 January 2013.

This legislation bans the placing on the EU market of new EEE containing more than the agreed levels of:

- lead (Pb)
- cadmium (Cd)
- mercury (Hg)
- hexavalent chromium (Cr6+)
- polybrominated biphenyls (PBB)
- polybrominated diphenyl ethers (PBDE)

Difference between RoHS and REACH:

There is often confusion between the two, so for clarity the main difference between RoHS and REACH is that RoHS bans substances that are present in **electrical equipment** that is within the directive. REACH, however, pertains to all chemicals including those used to make a product. This can include materials, solvents, paints, chemicals, and more.
